

## RAINBOW GRADIENT FOIL

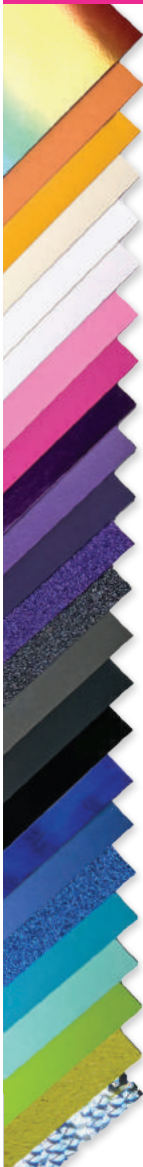

100# cover, 8.5" x 11"

### THE INSIDE SCOOP

This Rainbow Foil sheet was custom-made for Your Paper Insider. This sheet has a reflective metallic coating applied to its surface, giving it a shiny silver appearance. The rainbow color has been added through litho printing. Here is an inside look at how.

- **Material Pick:** We start by choosing the perfect paper or cardstock. For this sheet we use 100# white coverstock.
- **Film Coating:** The metallic coating on this sheet is made from thin aluminum, giving the paper a metallic silver appearance.
- **Foil Fusion:** Time to bring on the shine! The foil is pressed onto the prepared paper, using heat and pressure to lock in the shine.
- **Print the Rainbow:** Lithography, commonly known as litho printing, is a printing process that utilizes the principle of oil and water repulsion to reproduce an image on a flat surface, typically a metal plate, and then that image is transferred onto the surface, in this case, the silver foil cardstock.

Your Paper Insider BOX 7 boasts a sheet of this gorgeous paper. Want more? You can purchase this paper in 10-packs on the Your Paper Insider store.

## BIO CYCLE Chlorophyll Cardstock

This paper is created from grass cut from Upper Bavarian meadows. The grass is carefully harvested and dried to achieve the long-fibered structure. The vivid green colour is created in part by adding natural chlorophyll.
